The **summary of the day's counts is in bold** and the counts from individual sites are not.

- These data are inevitably incomplete. We have tried to keep them as accurate as possible by removing contentious records.
- On most days, we made observations while we were driving; these account for the differences between the individual site counts and the day's summary total.
- On 18.2, one car went over the Sanetti plateau to stay in the Harena forest and the other went east to Sof Omar. Unfortunately, I do not have individualised data for Sof Omar and other sites.

Breeding observations were limited:

- Crowned Eagle *Stephanoaetus coronatus*: a nest with a smallish chick, Wondo Genet, 15.2.11. Most of the nearby trees had been cut down and there was a charcoal fire at the bottom of the tree, so the chances that the chick fledged did not look high.
- Speckled Pigeons *Columba guinea*: 1 pair copulating, Awash, 12.2.11
- Bush Petronia *Gymnoris dentata*: nest with young in a dead tree stump, Melka Ghebdu, 12.2.11
- Purple Grenadier *Uraeginthus ianthinogaster*: female feeding well-fledged young, Melka Ghebdu, 12.2.11

Sites and dates
