Sierra Leone

2017 Year Report

&

Records of Interest

(White necked Picatharte - Picathartes gymnocephalus ©David Monticelli)

Momoh B. Sesay
INTRODUCTION

This is the report of the activities, initiatives and the most interesting bird species that have been recorded in 2017 by myself or by others.

The idea of this 39p. birding report - a first of its kind ! - is :

- to give a global image of what has been seen and done in Sierra Leone in 2017;
- to hopefully open the way to new birding initiatives and field projects.

The 2017 birding data have been collected from various internet platforms and sources as well as through contacting people. As a consequence, certain information is most probably missing. The enclosed annotated birdlist gives a fairly good snapshot of last year’s available data.

It also means you are definitely part of this year report initiative. So please, do contact us :

- for any further information or help;
- for giving us datas and feedbacks about your experience and any interesting birding records made around the country.

Whatever the way you choose for birding Sierra Leone a lot is still to be done there. It is no terra incognita but for some tricky species, there still is no really reliable site in the country.

I hope this first of his kind year report in this - magnificent and safe (!) - country of Sierra Leone will motivate more birdwatchers to come !

Best regards,

Momoh B. Sesay

I'm working as African Bird Club representative for Sierra Leone & as BirdLife International Field officer attached at Conservation Society of Sierra Leone (CSSL) helping Birdlife International on various projects - among other on the White-Necked Picathertes at Kambui Hill Forest.

As an official touristic guide focussed on wildlife and nature conservation I'm (co) organizing various field initiatives for all kinds of customers.

As a passionate birdwatcher, I'm birding since more than ten years here in Sierra Leone and got the chance to take part in many roundtrips, surveys and field reseaches all around the country.

If my full name is Momoh B Sesay people often call "Modu"

Journalistic & photographic support:

Special Thanks to:

David Monticelli belgian. Project Manager EU - DG DvCo EuropeAid. He worked as RSPB’s Conservation Scientist at the Gola Forest project. Excellent photographer he ’s given a precious help for the illustrations of this report.

Mail address : monticelli.david@gmail.com.
FB : https://www.facebook.com/david.monticelli.77
PBase : http://www.pbase.com/david_monticelli/birds_of_sierra_leone

Benoit Forget, belgian journalist and political adviser who visited the country as an independent birdwatcher in januari 2010 (cf. report on Cloudbirdersinternet site, ABC or Netfugl : http://www.netfugl.dk/trip_reports/africa/SierraLeone_2010_BFo.pdf + various articles on Ornithomedia birding magazine http://www.ornithomedia.com/ ). He did support the whole initiative and realization of this 2017 birding report.

Mail address : forgetb@hotmail.com.
FB: https://www.facebook.com/forget.benoit.5

(Enclosed picture with Momoh Sesay ("Modu") & Ben Forget taken near Freetown - 2010).
...And special thanks as well for all these anonymous motivated field workers of Sierra Leone so essential for the protection of nature!

Grey "Timneh" Parrot (Psitacus Erithacus) Survey Team at Mabondah with Dr Rowan Martin, Momoh Bai Sesay, Dr Okoni Williams, Musa and Alfred. December 2017.
BIRDING SIERRA LEONE

Some essential introductive information to Sierra Leone is to be found on African Birdclub website.

The most famous birding areas in Sierra Leone are the following:

- Freetown - Western Peninsular forest Reserve;
- Bumbuna savanna area;
- Outamna Kilimi NP;
- Tingi Mountains Hills;
- Tiwai Island;
- Kambui Hills (North/South);
- Gola Forest;
- Sonfon lake;
- Loma mountains;
- Outamba - Kilimi NP;
- Mamunta Mayosso.

A lot of less known places and remoted areas are however still definitely to be more thoroughly prospected.

ACTIVITIES & INITIATIVES - 2017
You may recall that on the 5th September 2016, ABC Sierra Leone started its activities according to the work plan. I started introduce ABC to various people potentially interested to become members. I visited as well institutions that are partners to environmental issues in Sierra Leone such as the Conservation Society of Sierra Leone (CSSL), the National Protection Agency (NPA) and the National Association of Certified Tourist Guides (NACTG).

The first meeting was organized on the 1st October 2016. Since then meetings are organized every last Saturday of every month. The idea was to bird in the morning and then meet and discuss current issues and projects.

According to the work plan, I had targeted five schools both primary and secondary to introduce ABC and encourage teenagers and professors to become member. As I started operation late this 2016, I started with three Schools: two primary and one Secondary School at Wellington Eastern part of Freetown and the Western area. The Schools are Freetown Secondary School for Girls the Wellington Muslim Association Primary School and the International Mission School. I continued this sensibilisation program in 2017.

International meetings

Senegal: PAOC meeting with Dr Rowan Martin (South Africa) - Grey Parrot project.
We have started collecting the Swab for the parrot, which are sold in the markets and confiscated once and posted the swab to UK for analysis. We had already submitted proposal on the Grey Parrot to Martin and were waiting for funding to start the survey.

Working with Dr Okoni Williams who Lecture at Fourahbay College and Head of Biological Department. We are already registered by, ecotourism and Environmental Impact Assessment Company called Stigma Nature Services We had organized African Bird Club in Sierra Leone with Dr Arnold Okoni Williams Interim Chairman including Eight other Members.

Meeting with ABC Chairman: discussion on the Club in Sierra Leone that were interested and I sent a short report about my work to promote the club. With the help of the Chairman given me the opportunity, for my country to become member of the club.
Germany: Meeting in Berlin - Wadden Sea Secretariat / trade fair. I was invited to attend the trade fair in Berlin, to develop Eco-Tourism in Sierra Leone, on the East Atlantic Flyways with the National Association of Certified Tourist Guide [NACTOG].

Field surveys

I have conducted various survey this year 2017. Among others for Cematt Company, Sierra Rutile, Sierra Mining Company and Gold Tree.

These Companies hire our consultancy and Tours firm Sigma Nature Services for us to conduct Environmental Impact Assessment for them.

Apart with these consultancies I conducted different field surveys, among other:

Conducted the January 2017, water birds count implemented by Conservation Society of Sierra Leone (CSSL), Areas covered on the count were:

- Sierra Leone River Estuary,
- Yawribay
- Kargboro Creek.

I took part in the Picathertes project monitoring and survey on the 19th April to the 22nd 2017, at Kamboi Hills Forest Reserve. The Forest lies 5km west of Kenema on the road to Blama, and it’s northern and southern sectors are bisected by the highway to Bo. It’s primarily demarcated a regulated logging area for the timber industry, to provide incomes to local communities, but it is also rich in wildlife, and home to the highest peak in the east, which stands at 645m.

The project was organized by Hazell Thompson of BirdLife international the Biodiversity of the Conservation Society Papanie Bai Sesay, Field Technician and myself (field officer Momoh Bai Sesay), for the Picathertes Project at Kamboi Hill Forest implemented by the Conservation Society of Sierra Leone.

I also took part in a one month Biodiversity survey for CSSL, at Lake Sonfon a project sponsored by African Bird Club (ABC) to look for the following Target species:

- Pied-winged Swallow (Hirundo leucosoma);
- Emerald Starling (Lamprotornis iris);
- Splendid Sunbird (Cinnyris coccinigastrus);
- Yellow-winged Pytilia (Pytilia hypogrammica);
Dybowski’s Twinspot (Euschistospiza dybowskii).

Lake Sonfon and environs IBA is known to support a rich bird community. Because the area is poorly studied, more species of the Sudan-Guinea Savannah biome are expected to occur than have been recorded to date. In the 2016 surveys, a total of 148 bird species were recorded.

Cf. online report: https://www.africanbirdclub.org/sites/default/files/2016_Lake_Sonfon.pdf

I conducted a field survey at Kambui Hill South from the 22nd to the 28th November 2017

Species recorded as follow.

I conducted the continuation and conclusion of the Kambui Hill field survey in December 2017.

As far as the Tinneh parrot survey is concerned it started on the 12th December 2017, at the Western Peninsular Forest Reserve and Community in Freetown that have the ecological habitat status of the Species. The survey and the interview goes simultaneously in the process of searching for the Grey Timneh Parrot. The areas covered various villages in the region. According to survey and interviews there are areas within this communities where people can testify they saw the species before around there community. It’s just because of human activities that the species stopped coming again. Some areas don’t know or see the bird. and we found two houses were the species is used as pet and one in another village where 2 adult Grey Parrots were breeding in a tree close the house and got four chiks. According to the care taker of the Grey Parrot, the species flowed for two or three days and come back to their nest.

On the 18th to the 19th December 2017, we extended the survey to the Southern Province Ribi and Gbompeh Chiefdom. The Villages visited on survey and the executions of the questionnaires are Jamaica Village, Mokomba, Mosamgboma, Doya and Sea Port. This locations survey was covered with Canopy forest mangroves, Wild palm trees and Coconuts plantation along the sand banks and mud close the rivers. According to interview and survey the species usually fly across the villages with flocks and gave alarms, the locals responded to them in greetings in Krio Ku sae ya while they are flying across. They nest in holes of dead palm trees, on the mangroves trunks and big canopy forest trees. The areas covered on the survey told us that the bird was very difficult to catch because of is nesting patterns and the fact that it bites very seriously. When villagers want to catch the bird they used cloths rap it in their hand grab the species. On the survey people testified that
people around the village catch the Grey parrot when deforested the mangroves sometimes got hold of the chiks. The people pet the Grey Timneh Parrot share telephone numbers with us for a visit to see the species and they also identified a tree where they feed on in the villages. On the survey we saw two Grey parrot at our first stop Jamaica village, roost on the mangroves gave there alarm calls and two at Makomba Village fly across the village. The peak of seen them in large flocks is between January and February although they can see them throughout the season.

On the 30th December 2017, we survey Shenge region We administer the questionnaires and conducted transect walk around the villages looking for nest and feeding sites. According to the survey observation the Grey Parrots are flying across the villages and villagers showed us the life flowers the Grey Parrots feed on all the villages visited. One fisherman interviewed told us that mostly the species breed on the mangroves trunk holes and also reported that somebody sold the Grey Parrot at Le 200,000 each, so when they cut down the mangroves to construct boat the Grey parrots were captured on that processed especially the chiks. Within the two feeding sites visited at Shenge region, I saw twenty two Grey Parrots feeding on the life flower trees fourteen on the first feeding site and ten from the second feeding site and two fly across the village. Our local guides who volunteer to monitor the activities of the Grey Parrot data, sighted about four hundred and thirty two Grey Parrots around Shenge Town from the 16th November to the 12th December 2017 between 7 and 8am in the morning some are feeding other fly across the town.

On the 21ft January 2018, we went in the field with Dr Rowan Martin Director of the World Parrot Trust. We Surveyed different communities at Moyamba District and Administer questionnaires form on the status of species.

Birding Tours & ecotourism

The EIA Bird list will have attached no birding tour for this year 2017.

I am only doing office field work prospection for Endemics and nesting sites.

With our advices towards conservation issues about nature in our country, people have seen that birds are very important in the ecosystem. Our communities have realized that Nature will make ecotourism develop in our Sierra Leone. We have hope for ecotourism to grow because both the Minister and Director of Tourism are with us.

Trainings

Improving Capacity of Bird Watching Guides in Sustainable Eco-Tourism in Sierra Leone - 30th Septembre to the 1st Octobre 2017 Sponsored by the Wadden Sea Secrétariat.

The Training took place at Shenge Town the southern part of our country Sierra Leone (Coordinate N: 0756253 W: 01232345 Elévation 125m). I was accompanied by David Monticelli who is working for the European Union and is definitely a good photographic birder. He might be right claiming to be the very first western Tourist to visit Kargboro Creeks Migratory site on the training. The training started with Stakeholders meeting with the elders to introduce the Project, we started with prayer and welcome address commented by the Paramount chief representative. Introduction of all Participants that attended comprising of following communities Shenge, Kata, Tissana Point, Plantain Island and Turtle Island. They were all encouraged to become African Bird Club membres and take the trainings on a practical session.
The purpose of the meeting was elaborated by the National Association of Certified Tourist Guide Trainer officer (myself Momoh Bai Sesay). We pointed out that our project Status is to improving capacity of Bird Watching Guides in a Sustainable eco-tourism in Sierra Leone. And stressed the idea that we want our communities to cooperate with us to have a sustainable tourism programme in their members, for them to have benefit from tourism activities.

We introduced bird watchers and bird rangers how to identify birds at the port side Shenge Town. We took them out on boat to the Kargboro Creek.

I also introduced the African Bird Club association to the trainees that showed their happiness to become ABC members.

In the evening we went out on a birding with the trainees where we spotted three European Turtle Dove on the 1st of September 2017 with David Monticelli who accompanied us on the training.

**Sandwich Tern** was captured by youth around our marine shore came from Denmark ringing code 480 V-3. The Director of National Tourist Board explaining to Student the importance of migratory birds and their flyways.

**ABC Bulletin**

Since we started getting the first Bulletin for the ABC for sure all the members received it although we've got some technical problems (the Bulletin didn't open according to ABC members, myself included!).

**Funding**

We received support and funding from the Wadden Sea Secretariat to initiate ecotourism activities on coastal areas like Aberdeen Creek, Yawribay and Kargboro Creek.
Encouraging

On a Nature Club launched by National Association of Certified Tourist Guide at the monument and relics. As the field officer and trainer for the Organization, I encouraged students to become ABC Members.

ABC - SL Meetings

African Bird Club SL Members held their first meeting discussing the way forward of the club activities. Members came up with a lots of suggestions for the club to have full operation 2018/20 as follows:

1. Organize regular meetings every month end;
2. Form Nature clubs in schools;
3. Bird watching with ABC Members every last Saturday of the month;
4. Fund Raising;
5. Project writing.
We only have organized one meeting to see the way forward for the club, among others because of the rains. We postponed all activities for November and introduced a WhatsApp Line to communicate with members.
Global Sierra Leone 2017

ANNOTATED BIRDLIST

(Forest Robin © David Monticelli - 2010)

Momoh Sesay & Benoit Forget
Introduction

Birding has been relatively limited this year as far as foreign birdwatchers are concerned. Probably note more than a twenty foreign birdwatchers visited the country in 2017.

No real organized birding group has neither visited the country this year. As a result, on a total SL Birdlist of 646 (ABC), 334 bird species have been recorded for SL leone in 2017.

The 2017 birding data have been collected from various internet platforms and sources as well as through contacting birdwatchers. As a consequence, certain information is most probably missing. However, this first annotated year list gives a fairly good snapshot of the available information.

Some general observations can be made about this year:

- Very few data have been collected on seabirds and waders;
- On a reasonable potential 30, of only 16 species of raptors with no data for the white backed vulture;
- Only 3 species of owls have been recorded but including the rufous fishing owl;
- This year has brought somewhat limited data for savanna birdspecies;
- Limited data have as well been recorded for waders and species from the western palearctic.
- All forest species of hornbills have been recorded this year.

Even if the information needs confirmation, it seems 2 new species have been added to the Sierra Leone birdlist this year:

- black stork;
- african silverbill.

Certain UGE & globally threatened species haven’t been seen this year:

- white breasted guineafowl;
- Nimba Flycatcher;
- Western Wattled Cuckoo-Shrike.

What is actually the status of these species for SL? Further field survey might bring answers to the question.

Some much sought after species have been recorded:

- Crested tiger heron;
- Rufous Fishing-owl;
- Sierra Leone Prina;
- Black headed rufous warbler.

Apart with the IBAs, some important SL birding places haven’t been visited even ones this year such as:

- Outamba Kilimi,
- Kangari hills.

It seems reasonable to think that some remoted areas probably still hold nice birding surprises. Some searching remain needed as certain places still haven’t recently (or ever) been surveyed as far as birds are concerned.
After some difficult years, 2018-2019 might be bring some good news as birding tour seem to slowly make their come back.

Certain Infrastructures badly need to be restored, some are unfortunately totally lacking.

Apart with birding there has been one very fruitful mammal survey this year conducted by Jon Hall.

More feedbacks are needed from field working: RSPB is working in SL since many years. This year surely has brought some good data that might be interesting to share.

**Abbreviations**

C. Davies: CD

**Places**

Freetown Western Peninsula: FWP.
Outamba - Kiilimi National Park: OKNP.
Mamuta Mayosso Wildlife Sanctuary: MM.
Gola North: GN.GRN.
Gola East: GE.GRN.
Loma Mountain: LM
Kambui Hill: KHN/S
Tingi Hills: TH
Tiwai Island: TI
Lake Sonfon: LS

**Comments**

NSR: Nothing Special to Report - common species:
NDA: No Data Available/not recorded this year

(UGE): Upper Guinea Endemic,
(NE): Near Endemic
(T): Threatened

*Potentially New species for SL birdlist are also put in RED*

**Names of the main contributors**

Modu Sesay: MS
Dr Martin: DrM
David Monticelli: DM
Wouter Rommens: WR
Steve Thorpe: ST
John Hall: JH
Various observers: VO
Anonymous: A
Nathan Peace: NP
Aaron Kortenhoven: AK
Mary Crickmore: MC
Magnus Grylle: MG

**ABC Key to status information**

N - Nearctic
O - Oceanic
P - breeds in Palearctic
R - Resident
SAT - Satellite record
V - Vagrant
W - Winters (non-breeding season)
X - Rejected record § and ? -

NB: *Combinations of these keys have been used throughout and should be self-explanatory but the following are some of the more common examples: RB - Resident in the country and breeding records*
confirmed; PW - breeds in the Palearctic and winters in the country; AM - Intra African Migrant; RB/PW - there is both a resident breeding population and a wintering population.

MC, CES GuestHouse (Yakala Region - Northern SL) 05 April 2017

Mammals

As far as mammals are concerned, some very interesting data have been recorded in April 2017 by a group of 4 Brittons that focused on 3 places for their fieldwork with the help of local RSPB guides:

- T : Tiwai;
- S Sileti;
- G: Gola.

Their final mammal list goes as follows:

1. Allen’s Wood Mouse Hylomyscus alleni T
2. Pel’s Scaly-tailed Squirrel Anomalurus pelii T
3. African Palm Civet Nandinia binotata G, S
4. Straw-colored Fruit Bat Eidolon helum T
5. Hammer-headed Fruit Bat Hypsignathus monstrosus M
6. Buettikofer’s Epauletted Bat Epomops buettikoferi T
7. Noack’s Roundleaf Bat Hipposideros ruber (and/or H. caffer/ H fulignosus) T
8. Unidentified Horseshoe Bat T
9. Beatrix’s Bat Glaucogonycteris beatrix T
10. Demidoff’s Galago Galagoides demidoff T
11. Thomas’ Galago Galagoides thomasi T, S
12. Potto Perodicticus potto T, S
13. Western Pied Colobus Colobus polykomos T, S
14. Western Red Colobus Piliocolobus badius T
15. Olive Colobus Procolobus verus T
16. Sooty Mangabey Cercocebus atys T
17. Campbell’s Monkey Cercopithecus campbelli T, S
18. Diana Monkey Cercopithecus diana T, S
19. Lesser Spot-nosed Monkey Cercopithecus petaurista T
20. Green Monkey Chlorocebus sabaenus T
21. Pygmy Hippopotamus Hexaprotodon liberiensis G
22. Red River Hog Potamochoerus porcus T*
23. Water Chevrotain Hyemoschus aquaticus G
24. Royal Antelope Neotragus pygmaeus S
25. Maxwell’s Duiker Cephalophus maxwellii M, S
26. Yellow-backed Duiker Cephalophus silvicultor S
27. Western Tree Hyrax Dendrohyrax dorsalis S
